Andrew N. Liveris Building (formerly named Sustainable Futures Building)

Andrew N. Liveris Building (formerly named Sustainable Futures Building) will:

- Support one of UQ's most consistently high performing schools with a history of significant research outcomes, industry engagement, innovation, and impactful alumni.
- Set a new standard in flexible and shared laboratory accommodation at UQ with an open plan design to ensure maximum opportunity for the undergraduates, postgraduates and staff to mix together and experience a research-led educational experience.
- Significantly increase the university's available supply of flat floor flexible teaching rooms for flipped classroom and problembased learning.
- Be UQ's flagship space integrating innovative teaching with interdisciplinary and solutions-focused research. The building
 design will support active learning, further developing UQ's global reputation as a leader in these activities. The new spaces will
 also act as a vibrant hub for industry and interdisciplinary collaboration to address global challenges in areas such as energy,
 water and sustainable manufacturing.
- Inspire students, research scholars, and staff alike and enable industry partners to participate in the learning and discovery process. The building will garner international attention and be a physical representation of the excellence that has defined UQ Engineering for over 100 years.
