GATTON RUGBY PAVILION

Consideration:

The proposal is for the construction of a simple pavilion structure from which the Gatton Rugby Club can serve food and drinks on game days at the main rugby field on campus. Currently, tents are erected for this purpose and the Club requires a more permanent solution to overcome problems posed by inclement weather and a lack of storage space. The proposed pavilion will provide a sheltered spectator platform and a secure servery/storage facility. Additionally, it will help to create a tangible home and identity for the Club where presentations and gatherings can take place.

The project was initiated as a result of the Club securing a sports and recreation grant from the local council.

Description:

The proposed structure is an elevated timber-framed pavilion of modest size. Materials include timber cladding and metal sheet roofing. A timber ramp will provide equitable access. The design is consistent with a number of similar structures on the Gatton campus. Electrical services are the only service fixture required to be connected to the structure.

The proposed site is on the west side of the Hugh Courtney Rugby Oval field, centred on the halfway line and situated on level ground between the touchline and an existing embankment.
