OVALS 2 AND 3 PAVILION

Consideration:

The current building located between ovals 2 and 3 is the original brick building built in 1961 with the addition of a new canteen block in 2005. The existing change facility and toilets are in poor condition due to age and heavy use and the current size of the changes rooms is too small for multiple teams playing on both ovals concurrently. Additionally, the change rooms are poorly lit, do not have adequate toilets or showers and do not comply with the disability access requirements. There is limited spectator seating and viewing.

The new proposal aims to demolish the exiting building and construct a new building on the same site. The facility will have eight new change rooms, referees rooms, a game day canteen, viewing areas for spectators, first aid room, club storage areas, ground storage areas and provide equitable access. The second floor will be used for clubs and will be a multi-function space and viewing deck for both playing pitches. The project also includes a small white picket fence to encompass Oval 2 and a shade structure over the existing grandstand.

Description:

The new building will be a face brick façade with a patterned effect of different natural colours included into the wall. The level two structure above will comprise fibre sheeting and metal facade with ample glazing incorporated for light and views of the games on either pitch. The proposed design is in keeping with the intent of the St Lucia master plan for that part of the campus.
existing amenities building
new roof structure to existing seating
new landscape seating area
new access paths & landscape
new amenities building
